2020 Programme of Training Courses in Measurement & Calibration
NSAI National Metrology Laboratory offers public courses to help individuals gain the skills that they require in the field of Measurement and Calibration. The courses detailed in this brochure are shown below.

Courses are to be held in NML or in-company on request. Additional courses may also be arranged on demand. All the tutors are experts in their field, and have extensive experience in training.

Understanding the principles of Measurement and Calibration can lead to better decisions on product purchasing, reduced need for expensive technical support and reduced operational mistakes with expensive consequences.
Please book online at www.nsai.ie or return the booking form to:

CT001
FOUNDATION COURSE IN MEASUREMENT & CALIBRATION

This training course is intended for professionals who are new to the field of calibration or who are responsible for the management and administration of an in-house calibration system.

COURSE CONTENT
• Measurement Standards and Traceability
• Measurement Uncertainty
• Test Uncertainty Ratio
• Instrument Accuracy Specification
• Calibration Certificates
• Recalibration Intervals
• Laboratory Accreditation
• Tour of NML facilities

Tuition will consist of classroom work, exercises and practical demonstrations.

DATES:
19th February 2020
20th May 2020
30th September 2020
18th November 2020

DURATION:
1 day

VENUE:
NML or in-company by arrangement

FEE:
€480 (including documentation, lunch and refreshments)

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
EVALUATING MEASUREMENT UNCERTAINTY

This training course is intended for professionals who perform or manage critical measurement/calibration tasks and who need to evaluate the measurement uncertainties associated with their measurement results. The course is based on the internationally accepted method given in the Guide to the Expression of Uncertainty in Measurement.

COURSE CONTENT
- The importance of measurement uncertainty
- Understanding and modelling the measurement process
- Statistical tools for uncertainty evaluation
- Identifying and assessing measurement input quantities
- Using Excel© to formulate an uncertainty budget
- Combining standard uncertainties
- Reporting the measurement uncertainty
- Worked examples and exercises on uncertainty evaluation

Tuition will consist of classroom work, exercises and practical sessions.

Note: Extra half day option available to discuss user specific uncertainty evaluations. (price on request)

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
CT003
PRACTICAL DIMENSIONAL CALIBRATION

This training course is intended for professionals who make dimensional measurements on components and for people who are responsible for the calibration of dimensional measuring instruments. The emphasis of this training course is on the practical aspects of dimensional measurement and calibration.

This course provides the knowledge and expertise for people who use measurement tools or require an appreciation of the importance of measurement, calibration and the use of dimensional measurement techniques to complete their daily tasks.

COURSE CONTENT
• Principles of Measurement and Calibration
• Dimensional units, traceability, and standards
• Uncertainty of Measurement
• Specifications and tolerances - interpretation of BS/ISO Specifications
• Usage, storage and handling of dimensional standards and artefacts
• Calibration of calipers, micrometers and dial gauges
• Use of gauge blocks in dimensional calibration
• Recording calibration results and reviewing calibration certificates
• Error avoidance tactics for dimensional measurements

Tuition will consist of classroom work, exercises and practical demonstrations.

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
CT004
PRACTICAL TEMPERATURE MEASUREMENT & CALIBRATION

The training course is intended for professionals who are responsible for the calibration of temperature measuring instruments and standards. The emphasis is on the practical aspects of temperature measurement and calibration.

The course provides the knowledge and expertise for those who use temperature measuring devices or require an appreciation of the importance of measurement, calibration and the use of temperature instruments and standards in the performance of their daily tasks.

COURSE CONTENT
• Principles of Temperature Measurement and Calibration
• Temperature Units, terminology, traceability and standards
• Thermometer Types: Thermocouples, Liquid in Glass thermometers, Platinum Resistance Thermometers and Thermistors
• Accuracy of Thermometers
• Temperature Mediums: Liquid Baths, Dry Blocks, Ovens
• Thermometer usage, selection and application - Sources of errors
• In-house calibration methods i.e. profiles in ovens

Tuition will consist of classroom work, exercises and practical sessions.

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.

DATE:
28th May 2020
22nd September 2020
On Demand

DURATION:
1 day

VENUE:
NML or in-company by arrangement

FEE:
€480 (including documentation, lunch and refreshments)
This training course is intended for those professionals who are responsible for the calibration of weighing machines and the maintenance of associated mass standards. The emphasis of this one day training course is on the practical aspects of mass measurement.

The course is designed to provide participants with an understanding of weighing machines and mass standards and covers topics such as mass classification, mass standards, calibration procedures and environmental influences.

COURSE CONTENT

- Review of general calibration principles
- Mass units, traceability, and standards
- Mass classification - construction, material, tolerances
- Mass standards - usage, storage and handling
- Selection of mass standards for in-house balance calibration
- Calibration of weighing machines and balances
- Minimum weight requirements
- Brief introduction to uncertainty of measurement
- Error avoidance tactics for mass measurements

Tuition will consist of classroom work, exercises and practical demonstrations.

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
The training course is intended for calibration professionals who are responsible for the calibration of electrical measuring instruments (DC and low frequency). The emphasis is on the practical aspects of electrical calibration.

**COURSE CONTENT**
- Review of general calibration principles
- Electrical units, traceability, and standards
- Calibration of hand-held digital multimeters
- Calibration of current and voltage sources
- Calibration of decade resistance boxes
- Error avoidance tactics for electrical measurements
- Further topics *

*As far as is possible, the course content is tailored to meet the specific needs of participants. This is done by means of a questionnaire which is sent to intending participants prior to the course.

*Tuition will consist of classroom work, exercises and practical sessions.*

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
CT009
TEMPERATURE / HUMIDITY MAPPING OF ENCLOSURES

The training course is intended for professionals involved in using, maintaining and calibrating temperature/ humidity chambers and enclosures and for those with responsibility for managing the enclosure calibration programme.

The emphasis of this course is on the best practice and review of relevant internationally accepted methods for enclosure mapping.

COURSE CONTENT
• Overview & introduction
• Temperature Mapping of Enclosures including latest Guidelines and Standards
• A comparison of Enclosure Validation Techniques as described in IEC 60068
• Calibration & mapping Techniques for temperature/ humidity enclosures

Tuition will consist of classroom work, exercises and practical demonstrations.

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
NML offers the possibility of taking a tailored course containing short training modules on specific topics, at a foundation and intermediate level. Such modules are ideal as refresher courses, for those already working in the field who wish to extend their knowledge to other measurement areas, or for those requiring training on a specific measurement topic.

Intending participants may tailor the course to their requirements by indicating the training modules of interest to them. NML will then arrange the course for a suitable date, normally within one month of the request. Training can be provided at the NML or in-company.

In the latter case, the practically based modules will require access to the company’s own laboratories facilities. Participants will receive a documentation pack for each training module. The courses are normally restricted to six persons or less. It is intended to add further modules in the near future.

_Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee._

CT011
PRACTICAL HUMIDITY MEASUREMENT & CALIBRATION

The training course is intended for those who are responsible for the calibration of humidity measuring instruments and standards. The emphasis is on the practical aspects of humidity measurement and calibration.

The course provides the knowledge and expertise for professionals who use humidity measuring devices or require an appreciation of the importance of measurement, calibration and the use of humidity instruments and standards in the performance of their daily tasks.

COURSE CONTENT

• Principles of Humidity measurement
• Hygrometric definitions, units, terminology, traceability
• How hygrometers work
• Types of hygrometers used in industry: Dew point instruments, Psychrometer, RH Instruments and Salt solutions
• Measurement uncertainty with particular reference to Climatic chambers, rooms
• Practical advice on applications

Tuition will consist of classroom work, exercises and practical demonstrations.

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
CT013
A PRACTITIONER’S GUIDE TO UNCERTAINTY OF MEASUREMENT

This one-day training course is intended for those who generate or employ critical measurement data in their day-to-day activities. It will provide a thorough understanding of measurement uncertainty, which is the metric universally used to quantify the quality of the information obtained from any measurement process.

It will cover the basic concepts underlying measurement uncertainty, common sources of uncertainty, uncertainty budgets, statement of uncertainty and the impact of measurement uncertainty on statements of compliance.

While it will deal principally with uncertainties in calibration and physical measurements, it will also outline the approach to evaluating uncertainty in analytical science. It will not deal in any detail with the mathematical and statistical tools used for evaluating uncertainty. Those interested in the mechanics of uncertainty evaluation should consider joining NML training course CT002.

COURSE CONTENT
- Measurement and measurement errors
- Measurement uncertainty as a quality metric
- Interpretation of uncertainty statements
- Overview of uncertainty evaluation method
- Common sources of uncertainty
- Examples of uncertainty budgets
- Uncertainty evaluation for analytical measurements
- Impact of measurement uncertainty on compliance statements

Tuition will consist of classroom work, exercises and practical demonstrations.

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
The training course is intended for those professionals involved in the calibration of manual and automatic pipettes. The emphasis of this training course is on the practical aspects of pipette calibration.

The course is designed to provide participants with an understanding of the techniques, sources or errors and measurement uncertainty in the calibration of pipettes.

COURSE CONTENT

- Review of Pipette Operation
- Principles of Pipette Calibration using gravimetric method
- Selection of balance for Pipette Calibration
- Techniques for Calibration of Pipettes
- Error avoidance tactics in Pipette Calibration

Tuition will consist of classroom work, exercises and practical demonstrations.

Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee.
The training course is intended for those professionals who are already familiar with the requirements of ISO/IEC 17025:2005, but are looking to better understand the changes that have been made, and how they will affect their organisation. It will give an awareness of the revised structure of ISO/IEC 17025:2017 and its role as a framework for demonstrating competence.

The course is designed to provide participants with knowledge of key changes to the new standard and discuss the cross-over with ISO 9001 (the two Management System Routes), taking into account some important changes relating to risks and opportunities and clarification on the decision rules associated with uncertainty and tolerance.

Tutor: Tim Alcock is a consultant in the field of quality management/improvement. He specialises in the application of management systems in Testing and Calibration Laboratories in the areas of ISO/IEC 17025/17020 and ISO 15189.

COURSE CONTENT
• Background to the changes to the Standard
• Relationship with other standards (such as ISO 9001 and ISO/IEC 17020)
• Revised structure and format of the Standard
• Changes and additional requirements from the current 2005 version
• Discussion session on the implication of the key changes to laboratory management systems

_Tuition will consist of classroom work and exercises_

_Cancellations within 2 weeks of course date will incur a charge of 50% of the course fee._
