| <b>Scope</b>             | <p>This Irish Standard specifies requirements for 13 A fused plugs having insulating sleeves on line and neutral pins, for household, commercial and light industrial purposes, with particular reference to safety in normal use. The plugs are suitable for the connection of portable appliances, sound-vision equipment, luminaires, etc. in a.c. circuits only, operating at voltages not exceeding 250 V r.m.s. at 50 Hz.</p> <p>Requirements are specified for plugs incorporating a fuse link complying with BS 1362:1973. The plugs may be rewirable or non-rewirable complete with flexible cord.</p> <p>Two categories of plugs are specified covering normal and rough use. Rewirable plugs are intended for use with flexible cords complying with I.S. 201 or I.S. 202 having conductor cross-sectional areas from 0.5 mm<sup>2</sup> to 1.5 mm<sup>2</sup> inclusive.</p> |                                   |      |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                   |      |

| <b>Scope</b>             | <p>This Irish Standard specifies requirements for 13 A switched and unswitched shuttered socket-outlets for household, commercial and light industrial purposes, with particular reference to safety in normal use. The socket-outlets are suitable for the connection of portable appliances, sound-vision equipment, luminaires, etc. in a.c. circuits only, operating at voltages not exceeding 250 V r.m.s. at 50 Hz using plugs in accordance with I.S. 401.</p> <p>Requirements are specified for 13 A shuttered socket-outlets in single or multiple arrangements, with or without associated controlling switches, for flush mounting in suitable boxes, e.g. complying with BS 4662, or for surface or panel mounting or for portable use. Fixed socket-outlets are intended for use with cables complying with I.S. 201 or I.S. 202 having copper conductors. Portable socket-outlets are intended for use with flexible cords, complying with I.S. 201 or I.S. 202. Socket-outlets containing devices other than fuse links, switches and indicator lamps are outside the scope of this standard.</p> |                                   |      |

| <b>Scope</b>             | <p>This Irish Standard specifies requirements for adaptors having insulating sleeves on the line and neutral plug pins and suitable for use with socket-outlets complying with I.S. 411, with particular reference to safety in normal use. Adaptors specified in this standard are intended for household, commercial and light industrial purposes. The adaptors are suitable for the connection of portable appliances, sound-vision equipment, luminaires, etc., in a.c. circuits only, operating at voltages not exceeding 250 V r.m.s. at 50 Hz.</p> <p><input type="checkbox"/> This standard also applies to shaver adaptors which have the brass earth pin replaced with a similarly dimensioned protrusion made of insulating material designated as an insulated shutter opening device (ISOD) designed to operate the shutter mechanism of a socket-outlet conforming to I.S. 411</p> |                                   |      |

| <b>Scope</b>             | <p>Separation of current part two of I.S. 328 into a separate standard.</p> <p>This Standard applies to the design, construction, inspection, testing, operation and maintenance of installations on pipelines used for the transmission of first and second family gases, i.e., manufactured towns gas, natural gas and substitute natural gas at maximum operating pressure over 16 bar and temperatures between -25 oC and +120 oC</p> <p>Pipeline installations include but are not restricted to pressure-reduction stations, meter stations, pig-trap stations and block valves. Compressor stations and compressed gas filling stations are excluded.</p> <p>If the inlet pipework of the station is a service line and the maximum upstream operating pressure does not exceed 16 bar and the design flow rate is equal to or less than 200 m3/h under normal conditions, EN 12279 applies.</p> <p>This Standard relates to conditions and practices currently in use in the transmission of gas. In addition materials and techniques of construction and operation are constantly being improved. It is intended to keep these factors under continuous review. As a result</p> |                                   |               |

| <b>Scope</b>             | <p>This code applies to the keeping of LPG in containers where the total quantity stored exceeds 15kg, but the general principles may be used when keeping smaller quantities. It also applies to containers on loaded vehicles parked other than on a public highway. The requirements of the Building regulations shall take precedence over any requirements of this Code.</p> <p>The contents of this document represent the general requirements for the safe storage of LPG cylinders and cartridges. However in specific circumstances the fire authorities may find it necessary to impose additional safeguards.</p> <p>It excludes:</p> <ol style="list-style-type: none"> <li>1) LPG containers being transported by road;</li> <li>2) cylinders fitted to a vehicle to provide fuel for any purpose on the vehicle</li> <li>3) the storage of aerosol products in which LPG is used as a propellant</li> <li>4) the use of LPG from cylinders in domestic and other similar situations</li> <li>5) LPG during the course of production</li> </ol> |                                   |               |

| <b>Scope</b>             | <p>Irish Standard 436 specifies materials, test methods, quality control, marking, packaging, transport and on-site storage requirements for timber post and wire farm fencing. The standard gives fencing arrangements for livestock enclosures for cattle, deer and sheep.</p> <p>Material requirements are specified for permanent electric fencing, however, installation and safety issues are not addressed.</p> |                                   |               |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                   |          |

| <b>Scope</b>             | <p>This Irish Standard specifies requirements for materials, design, manufacture, construction details, site work and quality control for platform timber frame construction. The scope of this Standard is limited to:</p> <ul style="list-style-type: none"> <li>- Buildings where the maximum number of storeys is four and the maximum height from the external ground level to the top floor level is 10 m;</li> <li>- Buildings where the maximum fire resistance is 60 minutes;</li> <li>- Buildings where timber materials are subject to either service classes 1 or 2;</li> <li>- Stud centres up to a maximum of 610 mm;</li> <li>- Panels manufactured using mechanical fasteners;</li> <li>- Buildings that have an outer leaf of masonry or timber cladding with a drained and ventilated cavity behind the outer leaf. Other external claddings, where a drained and ventilated cavity is provided, are allowed by this Standard provided they have an approval certificate.</li> </ul> <p>The on-site fabrication of timber frame wall panels is outside the scope of this Irish Standard.</p> |                                   |               |

| <b>Scope</b>             | <p>This Standard provides requirements and recommendations for the planning, design, installation, commissioning, servicing and maintenance of fire detection and alarm systems in premises including those used for residential/domestic purposes. The Standard does not recommend whether or not a fire alarm system should be installed in any given building (see Building Regulations, Technical Guidance Document B). When it has been determined that a Fire Detection and Alarm System (FDAS) is required, this standard is suitable.</p> <p>The systems covered in this Standard are referred to as Fire Detection and Alarm Systems (FDAS). The Standard covers systems ranging from simple installations with one or two manual call points, up to complex installations with automatic detectors, manual call points, control and indicating equipment, communication with the public fire service, etc. It also covers the provision of signals to initiate, in the event of a fire, the operation of ancillary services (see 6.16) and other precautions and actions, but it does not cover the ancillary services themselves.</p> <p>Consultation with the appropriate Fire Authority is advised before undertaking the design</p> |                                   |               |

| <b>Scope</b>             | <p>The S.R. will provide for the design, installation and commissioning of solar PV panels in new and existing dwellings. The target audience will include the professionals and installers involved. It will build on the requirements in related European Standards, S.R. 50-2, pr I.S. 10101 National Wiring Rules for Electrical Installations, SEAI Code of Practice for Solar Photovoltaic and the UK Microgeneration Certification Scheme. SEAI has committed to providing technical support to the project.</p> <p>The standard will provide the basis for upskilling industry and will form an integral part of the technical infrastructure necessary to phase out the use of fossil fuels in new dwellings.</p> |                                   |               |

| Scope             | <p>This S.R. providences for the design, installation and commissioning of residential heat pumps in new and existing dwellings. The target audience are professionals and installers involved in the design, specification, installation and commissioning of heat pumps. This S.R. draws on guidance already available in the SEAI Domestic Technical Standards and Specifications and UK Microgeneration Certification Scheme and adapt if for use as an National Standard Recommendation.</p> <p>Heat Pumps in Buildings Other than Dwellings or with a capacity of greater than 70kW are excluded.</p> |                            |               |

| <b>Scope</b>             | The Code of Practice sets out recommended practices for the safe use of cranes involved in construction work. Its provisions include safe systems of work, management, planning, selection, erection and dismantling, operation and maintenance of cranes and the selection of drivers, slinger/ signallers. The Code does not cover manually operated (non-powered) cranes, cranes in which at least one of the motions is manually operated on cranes mounted on water-borne vessels, except in those circumstances where a land based crane is temporarily affixed to a vessel. |                                   |               |
